

Basic Hydraulic Troubleshooting 3 Day Workshop

2018 Eugene, OR Workshop Agenda

Day 1	8:00 AM – 11:30 AM	Hydraulic Fundamentals
	11:30 AM – 12:15 PM	Lunch
	12:15 PM – 4:00 PM	Hydraulic Pumps
Day 2	8:00 AM – 10:30 AM	Directional Valves
	10:30 AM – 12:00 AM	Check and Logic Valves
	12:00 – 1:00	Lunch
	1:00 PM – 4:00 PM	Pressure Controls & Accumulators
Day 3	8:00 AM – 10:30 AM	Flow Controls & Hydraulic Motors
	11:30 AM – 12:15 PM	Lunch
	12:15 PM – 2:00 PM	Servo and Proportional Valves
	2:00 PM – 3:00 PM	Hydrostatic Drives
	3:00 PM – 4:00 PM	Fluid Maintenance

Included in the Workshop

- **Professional Instruction** from our consultants who have years of experience solving hydraulic problems through hands-on experience.
- **Our Full Color Basic Hydraulic Troubleshooting Manual** (over 200 pages) that has become the standard of excellence in hundreds of plants across the Country and in Canada.
- **GPM's Training Kit** that includes the Fluid Power Data Book (63 pages), a calculator, hydraulic safety stickers and course utensils.
- **Superior computerized animation** of pumps, valves and complete systems.
- **Your Basic Hydraulic Troubleshooting Certificate** to prove that you have successfully completed the nation's most respected hydraulic troubleshooting workshop.
- **Refreshments** provided each day of the workshop.

Workshop Learning Objectives

- ❑ The *three* tests that can be performed to determine if any pump is bad within 15 minutes or less.
- ❑ Our *four*-step pressure setting procedure developed exclusively to reduce heat, shock and leakage in *any* system.
- ❑ How to be certain that, when a valve is replaced, the spool, pilot and drain lines are exactly the same as the original.
- ❑ How to repair and pre-charge accumulators for maximum speed and shock absorption and the two quick checks that can be made to verify that it is operating properly.
- ❑ The *four* **safety** procedures that *must* be followed before charging, discharging and removing an accumulator prior to working on the system.
- ❑ How to troubleshoot the machine from the hydraulic schematic.
- ❑ The right and wrong methods of increasing the speed of the machine.
- ❑ The three factors that determine the flow through a flow control and how they affect the speed of the cylinder or motor.
- ❑ How to troubleshoot and adjust servo and proportional valves without contaminating the system.
- ❑ The *four* ways that contamination enters the system, how to control it – PLUS how to maintain the filters for extended component life and reduced machine wear.
- ❑ How to verify that a cylinder or motor is bad *before* it is changed.
- ❑ The ten most common causes of leaks and how to prevent them.

Registration Fee - \$995
